# BRIDGING THE GAP

Vericoin is the only coin trying to bridge the gap between the average user and the confusing world of Cryptocurrency.

A woman with dark hair tied back, wearing a brown jacket and a blue patterned scarf, is looking down at a smartphone in her hands. The background is a blurred mountain landscape with a cable car visible in the distance. A semi-transparent text box is overlaid on the left side of the image.

# Get more done anywhere using VeriCoin SMS wallet

Make transactions across the globe in just one push of a button.

The VeriCoin SMS wallet system functions as a remote, text-based gateway to the VeriCoin network. You can control it using the following commands.

Command List:	
"Balance"	Returns with your current VeriCoin balance.
"setpassword"	Sets your password (setpassword {password}). To change a password use (setpassword {oldpassword} {newpassword}). To use, add your password to the end of any command, ie. (balance {password}).
"Send {VRCADDRESS or PHONE#} {Amount of VRC}"	Withdraws VeriCoin to the provided address or phone number. Syntax: "send VTHZfUg11wEJmSgBLUcmCKGYekuqFcGHQq 100.5281" would withdraw 100.5281 VRC to VTHZfUg11wEJmSgBLUcmCKGYekuqFcGHQq. Likewise, the command "send 19085551234 284.1852" would send 284.1852 VRC to the phone number 19085551234. If 19085551234 does not have a VeriCoin wallet, one will be generated and 19085551234 will be messaged asking to accept or decline the deposit. No answer for 7 days will return the balance to the original wallet.

# VERICOIN ANONYMINITY

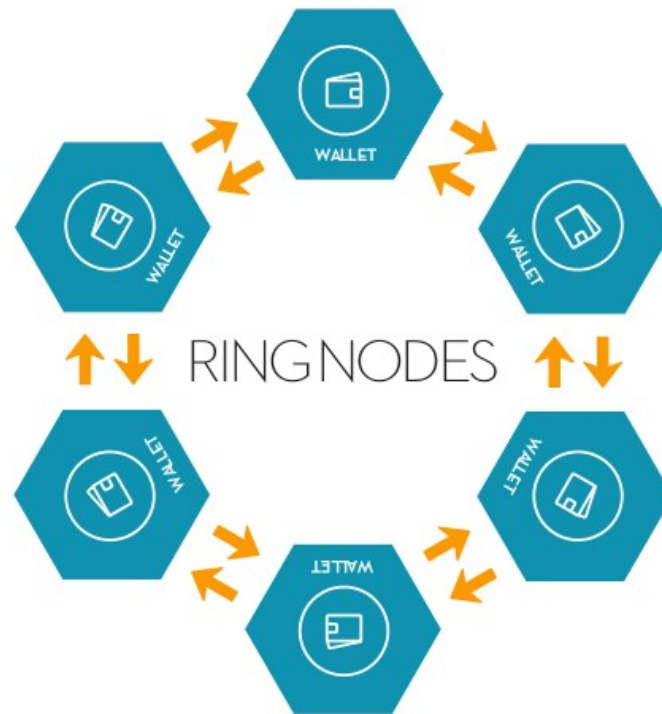

## WHAT IS VERISEND?

VeriSend is a service which attempts to mask transaction data from prying eyes. It utilizes ring nodes, random transaction send amounts, and various other techniques to hide the send/receive connection from the world.

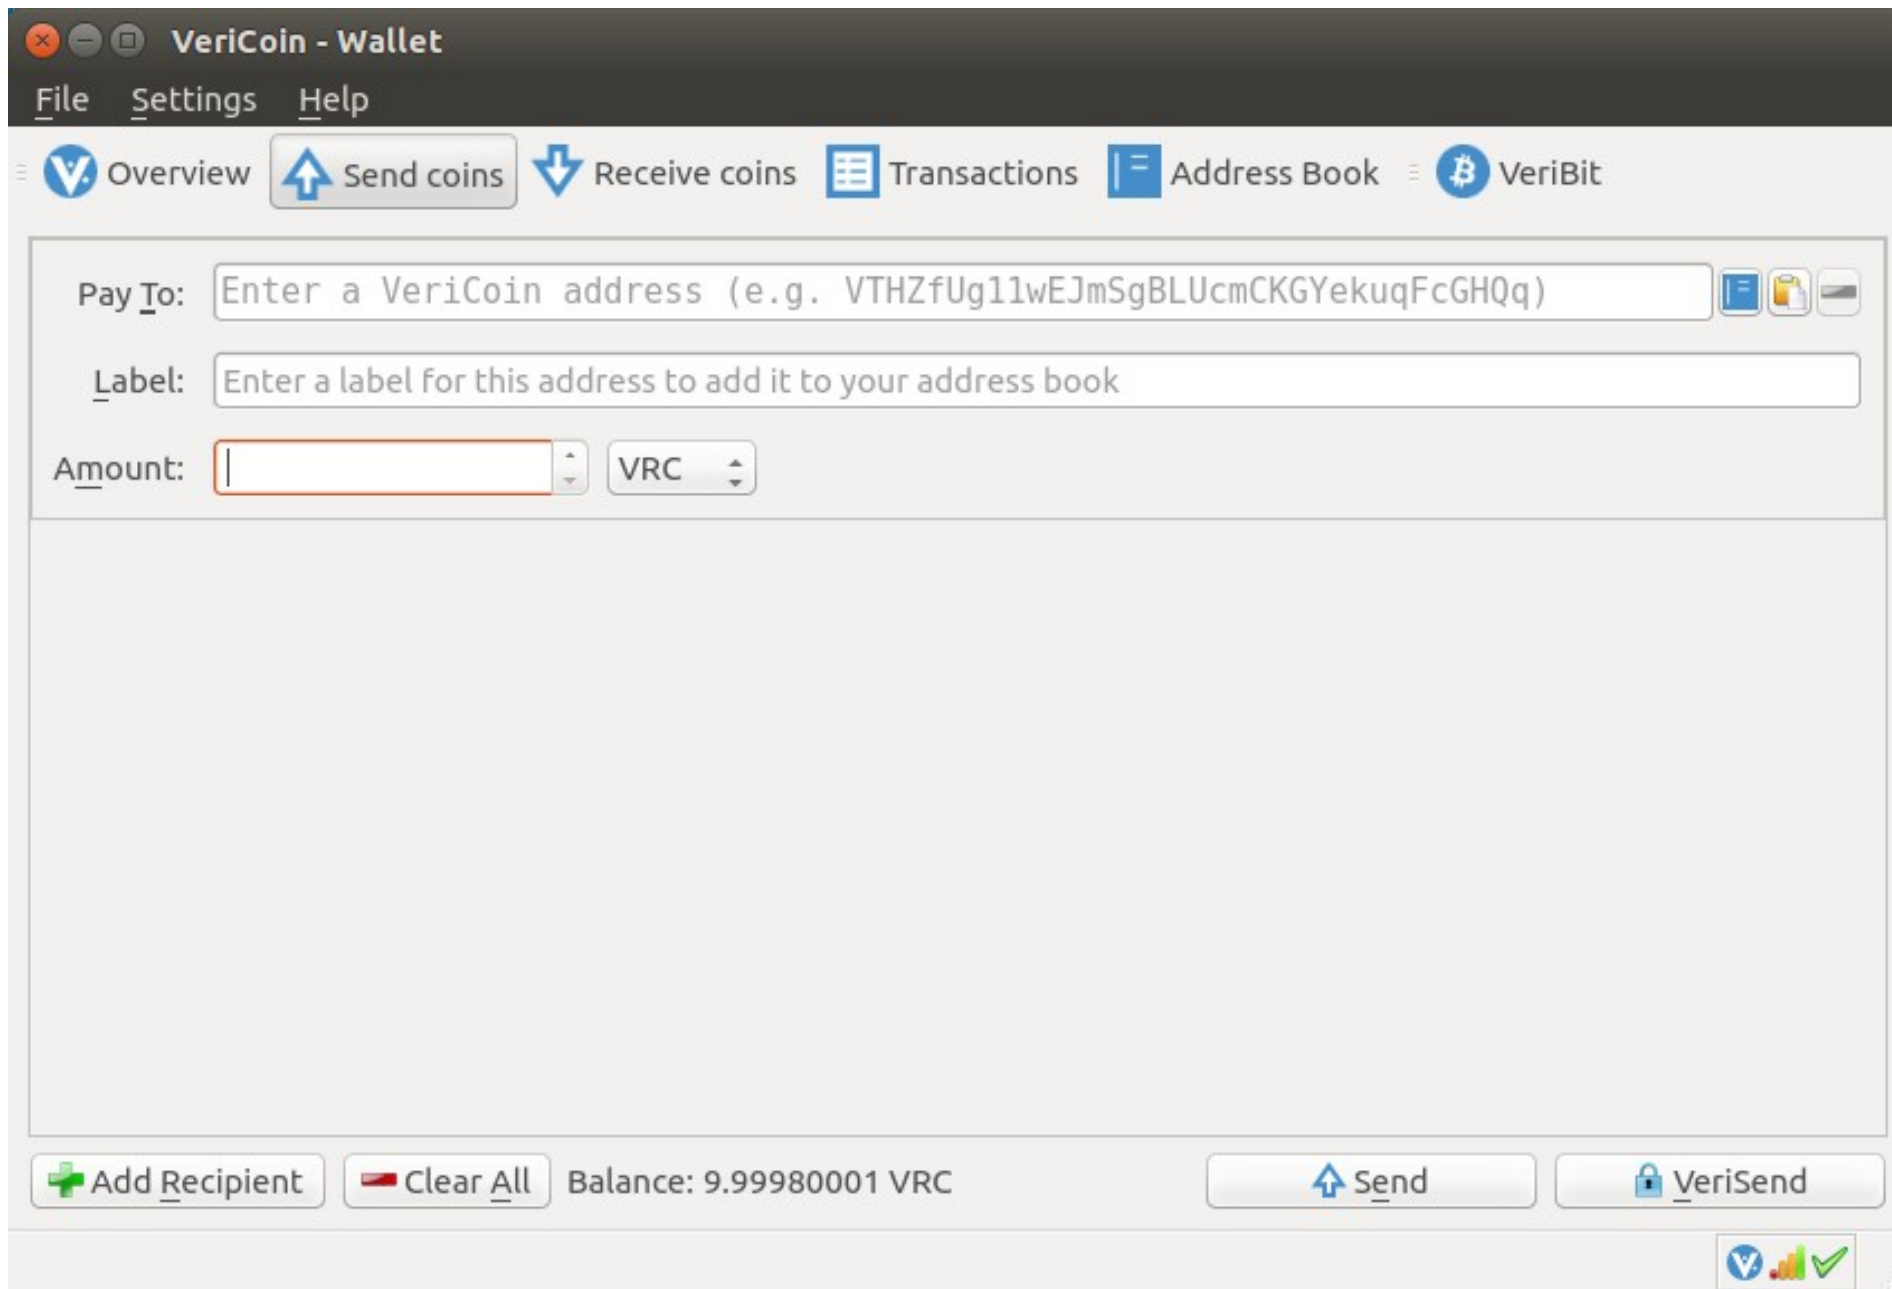

## RING NODES - CONTINUOUS LOCAL MIXING

Each Ring Node will be in full stake mode providing even greater mixing power

Internal Node Wallets continuously cycle coins (random amount) and validate the total wallet balance to ensure node stability.

With cycle times of 5 minutes, the total cost of operation will be ~12 VRC per day per node.

# VERIBIT SERVICE

VeriBit is a service which accepts VeriCoin payment for Bitcoin transactions. You can pay companies that accept Bitcoin using VeriCoin.

# HOW DOES VERIBIT WORK?

## VERIBIT SERVER

- Utilizes the Optimized Buying Algorithm to store large quantities of Bitcoin in advance of transactions
- Resupplies Bitcoin balance by selling VeriCoin during optimal value times as determined by the Optimal Buying Algorithm helping to prevent dumps of the coin

## WHY VERIBIT WORKS

- A large investor has allowed us to use a significant number of Bitcoins
- Transaction times are only slightly longer than that of Bitcoin alone
- Allows seamless transactions to thousands of retailers that accept Bitcoin
