

## Verium Wallet Import Guide

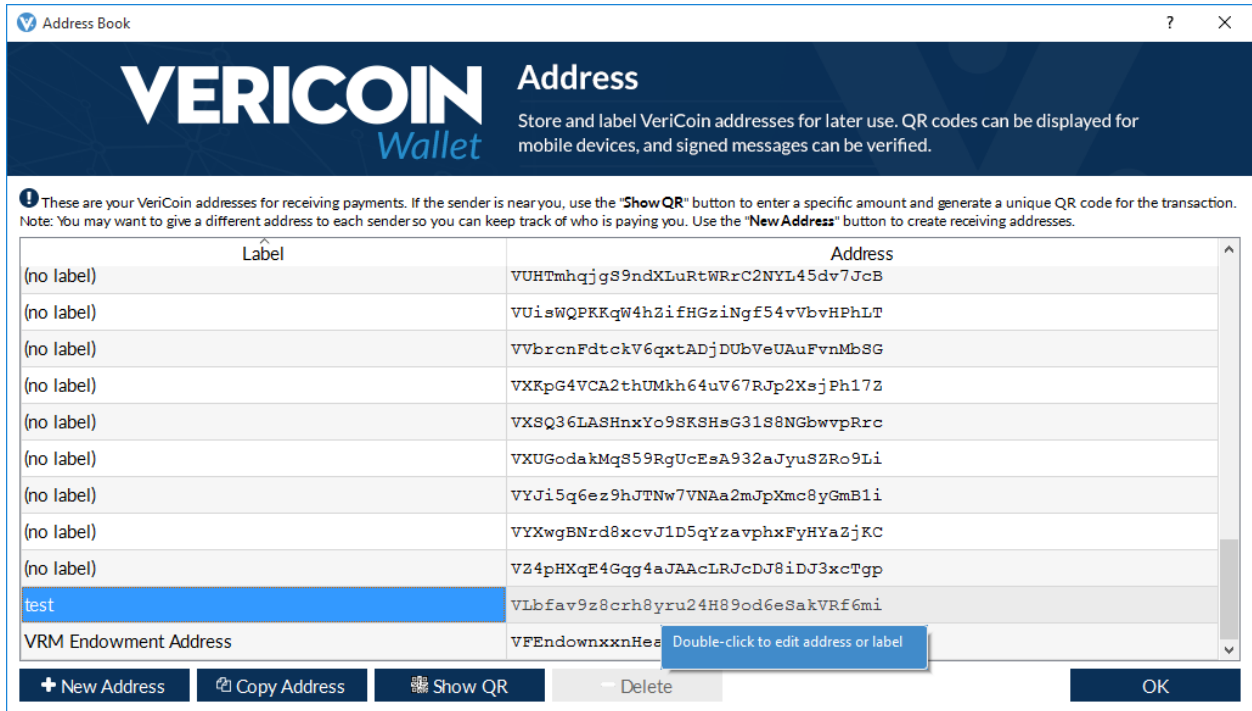

For ICO participants, you will need to import the private key of the VRC address you used during the ICO in order to access your new VRM. Follow these steps if you haven't done so. This process can also be used to use a single address across both VRC and VRM blockchains.

### Step 1. Export your private key from your VeriCoin wallet

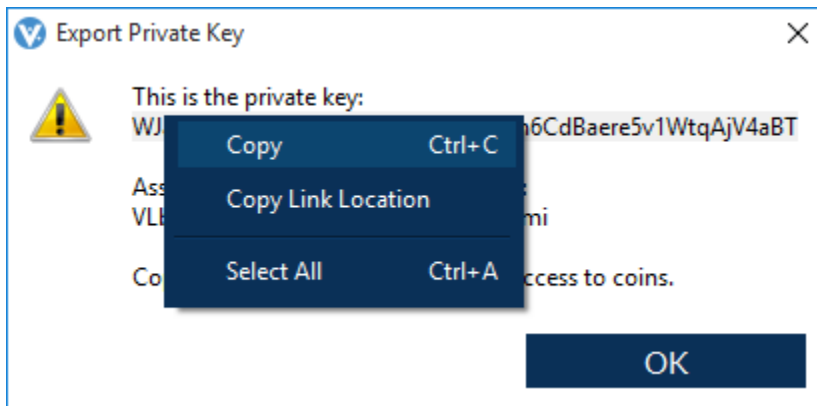

In the VeriCoin file menu, select Export Private key.

After entering your password, select the address you want to import into your Verium wallet.

Copy your private key by highlighting, right-click, and copy.

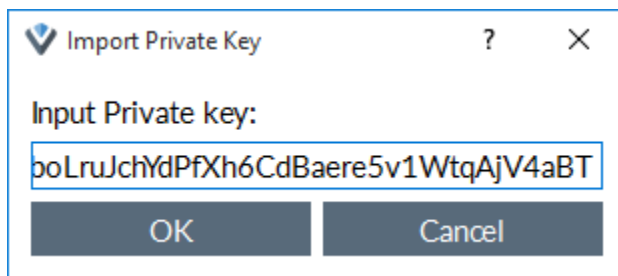

Step 2. Import your private key into your Verium wallet

In the Verium file menu, select Import Private key.

After typing in your password, paste your key and click OK.

That's it! Your address is imported. Once coins have been received, you will see the address in your address book (File->Address Book).

Label	Address
(no label)	VFEndownxxnHea9mv59kZx8c7TysGbndYx
(no label)	VLbfav9z8crh8yru24H89od6eSakVRf6mi
